## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1, 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Haumont et al U.S. Patent Number 6,233,458.

Re Claim 1, fig. 6 teaches a host in a data session with a MS via GSSN2, SGSN1, BSC1, and BTS 11, wherein the IP network includes plurality of SGSN(s);

Further teaches the GGSN2 (a Packet Core Function) includes context information (storing a static lookup table) that indicates the address of the MS (identifier for MN) is associated with a particular SGSN SGSN1 (See col. 5, lines 10-62 & col. 5, lines 20-65, i.e., example look-up table) wherein when the SGSN1, receive packets from the Host, utilizes the table to select the SGSN1 to host the data session to the MS.

Re Claim 2, refer to Claim 1, fig. 6 includes plurality of the GSSN (PFCs), wherein it is inherent to include every GSSN with lookup tables to support routing of packets.

## Allowable Subject Matter

3. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

In combination with Claims 1-3, prior art fails to teach performing a dormant handoff to handoff the MN from a source PFC to a target PFC by passing the identifier for the MN to the target PFC for selecting the PSDN.

4. Claims 4 -11 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

As prior art U.S. Patent Number 6404754 teaches the network identifying the service option in registering with the PDGN whether the mobile station is permanently assigned by an IP address and temporary assigned with an IP address by the PDGN. In particular, teaches if the PPP frame data is not transmitted in a dormant-open state, the RNC or PDGN drives a dormant timer and if expires, informs the MSC to release SVC PPP link for the mobile station.

Regarding Claims 4-5, prior art fails to storing in a cache memory in the source PCF, and identifier for the MN and an IP address for the particular PDSN for a predetermined period of time after handing off the MN.

Application/Control Number: 09/658,432

Art Unit: 2663

As prior art U.S. Patent Number the upon roaming of the MS to the target radio gateway, the Target Radio Gateway informs the B-party station with timer by transmitting the default frame identifying the selected Target Radio Gateway as the gateway handling the communication to the roamed mobile station.

Regarding Claims 6-8, prior art fails to teach upon initial selection by the PFC to host a data session, sending of the IP address of the particular PDSN to the MN from PFC; and passing of the IP address of the particular from the MN to any other PFC where the MN has roamed.

Regarding Claims 9-11, prior art fails to teach the hash function that associated the identifier for the MN with the particular PDSN to select the particular PDSN to host the data session for the MN.

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:
- U.S. Patent Number 6539225 teaches seamless data network during mobile handoff, wherein upon first and second registration of mobile during handoff, routing communication content on behalf of the mobile node to second address for delivery to mobile node:
  - U.S. Patent Number 6256300 teaches mobility management for handoff;
  - U.S. Patent Number 6137791 teaches roaming of mobile within an incompatible network;
  - U.S. Patent Number 6590905 teaches changing parameters during connections;
  - U.S. Patent Number 6466556 teaches handoff of packet data flow.
